a Production inside an ongoing activity

Architecture proposal

Create and revise within an activity; choose what to keep, change or discontinue.

Situated inputs

U

"Widen the passage. Keep our activity."

Capture / references

Existing work + context

Source G; visible facts o

Production routes

k

Source editing
Fixed LLM + tools

Reconstruction
Proposed interface

Specialist models
Assets / behavior

Editable world source

$G = (V, E, A, B, R)$

Identity and dependencies

A Assets
Surfaces · appearance

B Bodies / actions
Joints · reach · contact

R Mechanisms
Events · rules · abilities

Dependency propagation

Use and presentation

Compile / check / install
New source + current state
Selected obligations

x now

Executable state → native view
Enhanced rendering: proposed

State remains with the host.

Use → new intention → another revision

H

Implemented: restricted source editing, rigid relations, local installation and native export.
Example dependency: opening width → anchors and joints → passage conditions.

b From production experience to a reusable method

Research hypothesis

Production history H

H

Revise
Keep part
Change goal

Works · edits · use outcomes
Alternatives · scope · reasons

Infer and challenge a method

$k : G \rightarrow G'$ Transformation

C_k Scope: G, U and visible facts

V_k Tests and counterexamples

Freeze

k

Revise when contradicted

Reuse on unseen structures

New body topology

New mechanism

Apply only within scope; validate use.

H: record production and use. k: scoped reuse in the next source edit. Untested structures stay held out.
