a Structural generation and installation under incomplete checks

One fixed model response • public repair tool • installation against current activity state

Model-visible input

Current source G
- hinge → panel
- post
- receiver

Request: two leaves + constraints
Old facts: q = 0.8; actor z = 3
No serialized full-state input

Source generation
Existing IDs retained
New parts + joint init.

G*

qwen3.7-plus-2026-05-26

Explicit geometric projection

Receiver projection
x: 2.525 → 2.475 m
No part generation

G′, J

Same tool available to all methods

Installation boundary
Version · occupancy checks
Closed leaf · actor state
Commit source + state

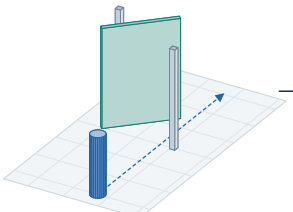

Projection: corrected geometry.
Model: new articulated parts.

Pass: G′, migrated state
Fail: retain current work

b Source changes; the activity continues from its current state

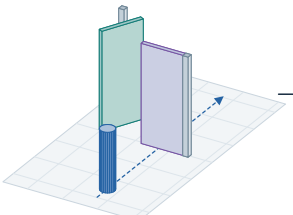

Exact geometry and state reconstructed from the saved artifact; no inference-time concurrency claim.

Snapshot
Model context

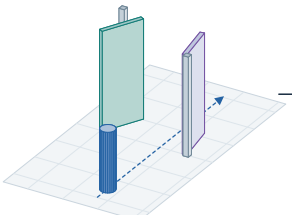

Left q = 0.8; actor z = 3
Held object: keepsake
Host advanced before call

Install
New leaf closed

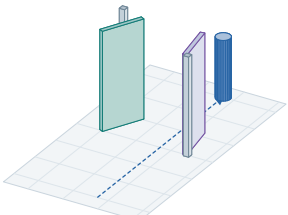

Left q = 1.1; actor z = 2.5
Held object: keepsake
Right q = 0

Open new leaf
Then use the mechanism

Left q = 1.1; actor z = 2.5
Held object: keepsake
Right q = -1.4

Continue
Traverse succeeds

Left q = 1.1; actor z = -3
Held object: keepsake
Right q = -1.4

One development chain, not a learned-method comparison. Distances in metres; joint angles in radians.

Missed request: fixed post moved 0.20 m in z. Traversal passed; the full edit request did not.
